Abstract (en)

[origin: WO2014070678A1] A holder for securing glasses or other personal item that is securely incorporated into an article of clothing or accessory at the time of manufacture. The holder includes a base member inserted into or attached to the article or accessory or to a trim which is itself attached to an article or accessory. A hanger is connected to the base member and includes a loop connected to a support base. One or more openings can be provided on the base member. The support base and base member can be integrally formed. The support base can be formed from part of the article or accessory or trim. The holder allows a wearer to insert a piece of a pair of glasses, or a part of another item, through the loop and allows the item to assume a secure and relatively flat position. It may include an RFID tag and/or a cover.
