Abstract (en)
[origin: CA2888947A1] The invention relates to a vessel, in particular for receiving small quantities of liquid, for example for receiving analysis samples, preferably comprising a vessel body (2) which has a small diameter relative to a vessel length. The vessel body (2) has a longitudinal axis (A) and an opening (3) which can be closed by a screw cap (4). The aim of the invention is to provide a vessel for receiving analysis samples in particular, wherein the vessel is advantageously easy to handle with respect to closing the vessel. This is achieved in that the screw cap (4) can be secured by plugging the screw cap in the direction of the longitudinal axis (A) in order to close the opening (3) using an adapter part (6) to which the screw cap is screw-fastened; afterwards, however, the opening (3) can only be released by unscrewing the screw cap (4).
