Abstract (en)
[origin: WO2014063981A1] The invention relates to a container (11) and to the use thereof. The container has a chamber (21) with a base (23) for receiving a mixture component and an adapter (51) for fixing the chamber (21) to a second container (13). The adapter (51) is connected to the chamber (21) via a first connecting means (61) and has a second connecting means (63) for connecting to the second container (13). Additionally, the adapter forms a flow channel (65) for the mixture component, said flow channel extending between the first and the second connecting means (61) and (63). The adapter (51) also has a blade element (71) in the flow channel (65), said blade element comprising a blade (73) facing the base (23) of the chamber (21) in order to open the base (23). The first connecting means (61) allows the chamber (21) to rotate relative to the adapter (51) and to the blade (73), said blade (73) being designed to cut through the base (23) of the chamber (21) along the edge of the base while the chamber (21) rotates, wherein the chamber (21) and the adapter (51) are connected to each other in a non-removable manner.
