Abstract (en)

[origin: WO2014066851A1] Provided herein are antisense oligonucleotides that can effectively prevent or decrease c-myc protein expression as well as decrease overall rates of cell proliferation in in vitro and mammalian in vivo models of cell proliferative disorders as well as methods for using the same. The antisense oligonucleotides comprise at least one phosphoramidate (NP)-modified or thiophosphoramidate (NPS)-modified intersubunit linkage.
