Abstract (en)

[origin: WO2014064722A1] An air-cooled disk brake (1) for industrial applications, comprising a main body designed for connection to an industrial apparatus and comprising two interconnectable circular flanges (110, 120), at least one brake disk (200) being interposed between said flanges (110, 120) and being adapted to rotate about its own axis (x<sub>1</sub>) and a friction unit (130). Particularly, the friction unit (130) comprises at least one longitudinally sliding friction element (132) which is designed for engagement with the brake disk (200), and a pneumatic actuator (134) that controls the longitudinal movement of the friction element (132) on the brake disk (200). Each flange (110, 120) is composed of at least two mutually joinable, substantially semicircular flange halves.
