Abstract (en)

[origin: WO2014064139A1] A plate-like light emission element (1) for a luminaire (2) has a first partial region (3) and a second partial region (4), wherein the first partial region (3) is arranged downstream of the second partial region (4), wherein the first partial region (3) is configured to form a light emission surface (5) of the luminaire (2) and the second partial region (4) is configured not to form an outer surface region of the luminaire (2), wherein the first partial region (3) consists of an optically clear material and wherein the second partial region (4) directly adjoins the first partial region (3) with a portion (41) consisting of an optically diffuse material. At least one cutout (7) for mounting the light emission element (1) is formed on an outer periphery of the second partial region (4) and extends as far as toward the light emission surface (5).
