Abstract (en)

[origin: WO2014064354A1] The invention relates to a housing comprising: a chamber; a cover (12); and a means (111) for attaching the chamber to the cover. Said cover comprises a hole (121), said hole (121) being suitable for having the attachment means (111) pass therethrough, one end of the attachment means (111) projecting from the hole (121), such to have the shape thereof changed by means of heading. The invention is characterized in that the cover (12) comprises a continuous reinforcement (122) on the edge of the hole (121), and in that, during heading of the end of the attachment means (111), the reinforcement (122) melts at least partially in contact with the end of the attachment means (111) such as to form a weld.
