Abstract (en)

[origin: US2014150166A1] The present invention relates to pair of trousers. The trousers include an inseam panel that is continuous across the crotch and down the inside longitudinal lines of the legs, preventing the need for an actual seam on the inseam of the trousers. The inseam panel is connected to the other fabric of the trousers with seams that are disposed away from the traditional inseam location and away from the crotch area. The inseam panel increases in width from the knees to the crotch. The inseam panel is also a stretch fabric with a primary stretch direction oriented on a bias to the longitudinal direction of the inseam panel and legs of the trousers.
