Abstract (en)

[origin: WO2014059963A1] The invention relates to a method for coating objects, in particular vehicles and vehicle parts, to a film coating that after use can be peeled off a vehicle again or can be sprayed over, and to a vehicle provided with the film coating. A film is sprayed onto the vehicle. For this purpose a liquid rubber is used, which is applied to the vehicle in several layers. A "rubber film" is thus built up layer by layer, which in the finished state is indistinguishable from a normal coat of varnish and can be peeled off again completely and without leaving remnants. This "rubber film" is sealed by subsequent application of a seal using clear coating material or one-coat coating material.
