Abstract (en)

[origin: WO2014067592A1] The invention relates to a device for passing at least one fibre tow repeatedly through an oxidation furnace by means of godets, wherein the at least one fibre tow is deflected by means of at least one godet that is arranged offset. According to the invention, it is provided that the godet comprises a shaft, onto which at least two individual rollers can be fitted, wherein each individual roller is arranged rotatably on the shaft.
