Abstract (en)
[origin: WO2014067629A1] The invention relates to a cable connection module (1), comprising an electrically insulating housing (2) and an electrically conductive conducting body (3), which is electrically conductively connectable to cables (9), wherein the conducting body (3) is arranged regionally electrically insulated in the housing (2) and, in respect of the object of configuring and developing a cable connection module in such a way that said cable connection module can be used variably in conjunction with different cables without any problems and safely is characterized in that the conducting body (3) is in the form of a bar, which is held in an accommodating device (4), wherein the accommodating device (4) is accommodated at least regionally in the housing (2), and wherein the bar protrudes out of the housing (2) with a free end (5).
