Abstract (en)

[origin: EP2915628A1] A method for vibratory finishing of a composite laminate part includes placing particles of a vibratory media into a trough of a vibratory finishing machine, the particles of a vibratory media comprising titanium oxide abrasive in a synthetic binder, the method further comprising placing a composite laminate part into the trough such that the composite laminate part is substantially immersed in the vibratory media, and operating the vibratory finishing machine at a vibrational frequency of 40 Hz to 50 Hz with the vibratory media and composite laminate part disposed in the trough.
