Abstract (en)

[origin: CN104891272A] The present invention relates to a workstation (12) of a textile machine with a paraffinization device (20) for a cable (2). The paraffinization device (20) comprises a wax body (22) and a receiving core shaft (21). In order to paraffinize the cable (2), the wax body is guided from the sides of lower part or the upper part of the receiving core shaft (21). The workstation (12), in view of the moving direction of the cable, is provided with guiding components (5, 25) arranged at the upper stream of the paraffinization device (25). A cable horizontal device (6) is provided at the back of the paraffinization device. In terms of the cable horizontal central plane, the receiving core shaft and the cable are in bias arrangement, or rather, the upper stream guiding components are in bias arrangement with regard to the cable and the receiving core shaft.
