Abstract (en)
A reinforced door (1) of the type that comprises at least one frame (2) provided with at least one upright and at least one crossmember that can be installed in an opening of a wall and at least one leaf (3) provided with at least one perimetric border (4), with at least one panel (5) that constitutes a face of the leaf, with internal reinforcement and stiffening elements (6), with insulating material (7) and with a lock (8) controlled by respective bolts (9). Between the frame (2) and the leaf (3) there is interposed at least one mutual connection hinge (10), which comprises at least one plate (11) that can be coupled detachably to a respective upright. The plate (11) is provided with at least one hollow protruding block (12) for the pivoting of a slider (13) for supporting the hinge (14). Between the plate (11) and the slider (13) there are means for adjusting their mutual arrangement, perimetrically to the leaf (3) there is at least one sealing gasket (15) intended to abut against a corresponding surface of the frame (2) exclusively at predefined conditions of mutual alignment thereof that derive from the mutual arrangement of said plate (11) and the slider (13).
