Abstract (en)
[origin: EP2727480A1] The present invention provides a system (1) for assessment of smoking articles (3), such as cigarettes or the like, having an inspection device (5) comprising at least one sensor (7) for inspecting or analysing the smoking articles (3) during transport of the smoking articles along a transport path (4). The inspection device (5) defines an inspection zone (6) that is arranged in the transport path (4). The inspection zone (6) is furthermore arranged or located between manufacturing equipment (M) for assembly of the smoking articles and packaging equipment (P) for packaging a predetermined number of the smoking articles into packs. The invention also provides a method of assessing the smoking articles.
