Abstract (en)  
[origin: WO2014071953A1] A load carrier (1) comprising four side faces (5) and a base part (3') having a top face and a bottom face. The base part (3') comprises pins (3) for retaining containers (21). Two charged load carriers (1) can be stacked with or without the containers (21) arranged between the two load carriers (1). Each load carrier (1) comprises a handle (2) which is located above an opening (6) in the base of the load carrier (1) and such that the centre of gravity of the load carrier is below the handle (2). The handle (2) is configured with a hollow and a length being adapted to the container (21) so that the handle (2) from the underlying load carrier (1) is received in the handle (2) of the superposed load carrier (1), when the two load carriers (1) are stacked without containers (21) arranged between the two load carriers (1).
