Abstract (en)
[origin: WO2014071429A1] The invention relates to a method for signaling the danger of a crane tipping, comprising at least three alarm systems for signaling tipping warnings using a respective safety programme. At least one measurement value is obtained from the crane, at least two alarm systems for signaling the tipping warning are selected in accordance with the at least one measurement value and if a warning of tipping is signaled by at least two of the at least two selected alarm signals, a tipping warning is signalled.
