Abstract (en)
[origin: WO2014071933A1] The present invention relates to a clutch device having a counterpressure plate and a pressure plate, which pressure plate can be displaced to a limited extent in an axial direction of said clutch device by at least one lever element, for clamping a clutch disc between said counterpressure plate and said pressure plate in a frictionally locked manner, the counterpressure plate having at least one lug section which extends in an axial direction and with which a cover component is connected.
