Abstract (en)
[origin: WO2014072489A1] The invention relates to a system for ventilating a building, having supply ducts (5, 9, 12) for supplying supply air into different regions (8, 11, 14) of the building and/or exhaust ducts (21) for discharging exhaust air from the different regions (15, 16, 17) of the building, wherein a plurality of air-conveying means (7, 10, 13, 18, 19, 20) is present, wherein the air-conveying means (7, 10, 13, 18, 19, 20) are arranged to convey the supply air into different regions of the building (8, 11, 14) and/or to discharge the exhaust air from the different regions (15, 16, 17) of the building, and a distributor (3) for the supply air for the different regions of the building (8, 11, 14) and/or a collector (3) for the exhaust air from the different regions (15, 16, 17) of the building is present, wherein there is no central air-conveying means.
