Abstract (en)

[origin: WO2014071428A2] A data transmission from a control device (100) to a load (52) is carried out via a load line (40). The control device (100) comprises a first switching means (121) and a second switching means (122) which are switched in a series circuit between an input terminal (101) and an output terminal (102) of the control device (100). A control circuit (110) is coupled to the first switching means (121) and the second switching means (122) and is configured to generate a control signal (ctrl) for controlling the first switching means (121) and/or the second switching means (122) so as to transmit data bits.
