Abstract (en)

An illumination module (100), comprising a first heat dissipation means (1), a light engine (2) arranged on the first heat dissipation means (1), and a second heat dissipation means (3) connected to the first heat dissipation means (1), characterized in that the first heat dissipation means (1) comprises at least one first heat dissipation structure (31) configured as through hole, and the second heat dissipation means (3) comprises at least one second heat dissipation structure (32), wherein the second heat dissipation structure (32) comprises a heat dissipating hole (321) opened on the second heat dissipation means (3) and a protrusion (322) consisting of a part to be removed from the second heat dissipation means (3) for opening the heat dissipating hole (321).
