Abstract (en)  
A heating device (1) for a domestic user fluid (7), comprising at least a compressor (2) suitable to compress an interface fluid (6), at least one evaporator (3) suitable to transfer thermal energy from an exchange fluid (9) to the interface fluid (6), to allow the evaporation of the interface fluid (6), at least one capacitor (4) suitable to transfer thermal energy from the interface fluid (6) to the user fluid (7), an expansion unit (5) suitable to restore at least partially the interface fluid (6) under the conditions of pressure and temperature similar to those before the passing of the interface fluid (6) in the evaporator (3); a storage tank (8) for the user fluid (7) for domestic use comprising at least one inlet duct (8a) for the user fluid and an outlet duct (8b) for the user fluid. The user fluid (7) and the exchange fluid (9) are the same fluid and are water supplied to the heating device via a supply duct (10) connected to a water supply.
