Abstract (en)

[origin: EP2918938A1] The air volume decreases as cold air from an air delivery fan collides with an auxiliary up-down wind direction plate. An air conditioner 1 includes an air delivery fan 3 which is provided on an air passage from an inlet port 13 to an outlet port 14, an up-down wind direction plate 6 which is rotatably supported in the vicinity of the outlet port 14 and extends along the length of the outlet port 14, and an auxiliary up-down wind direction plate 7 which is rotatably supported above the up-down wind direction plate 6 and extends along the length of the outlet port 14. An upper wall portion 15 of the air passage includes a first upper wall portion 16 which inclines downward toward the front and a second upper wall portion 17 which is provided to the front of the first upper wall portion 16 to widen the air passage. In a cooling operation, the air conditioner 1 is arranged such that the auxiliary up-down wind direction plate 7 is positioned on the second upper wall portion 17 side of a plane which is an extension of the first upper wall portion 16.
