Abstract (en)  
An electromagnetic relay (1) includes a slide switch (2; 202) capable of preventing an unintentional change in open and close states of a contact (31 b, 32b, 33b). The electromagnetic relay (1) also includes a cover (70; 270), a slide lever (80; 280) and an elastic test button (90) each housed in the cover (70; 270), and a stopper (100; 300) mounted on the cover (70; 270). The stopper (100; 300) is disposed to restrict the position of the slide lever (80; 280). The stopper (100; 300) is capable of restricting the slide lever (80; 280) to a return position of the slide lever (80; 280) to return a contact mechanism (30) to a return state.
