Abstract (en)

[origin: EP2919442A1] A system for providing sound alerts or recommendations to subscribed users to increase his awareness regarding entities of interest in his vicinity, which comprises a management server which is linked to a cellular network serving a plurality of subscribed users; a database containing pre-recorded characteristic sounds that are associated with the users, such that each user has at least one characteristic sound; a Sensor Input collection module for collecting data representing the behavioral pattern of the users; a Context Engine for generating contexts, which defines the behavioral patterns of the users using a learning mechanism which uses the collected data from the sensors; a Recommendation/Awareness Engine, which generates a recommendations or alerts, based on a learning mechanism that adjusts the recommendations/alerts upon receiving feedback from the user; and an audio Output Module for generating online recommendation and awareness outputs being relevant to the context of each user.
