Abstract (en)

[origin: EP2919447A1] A system for building pseudo-fabricated records for telecommunication platform, based on true communication records, which comprises a module which comprises all the true call detail records of the users; an infrastructure data source, which translates the signaling data received from a wireless communication network into geographical means; a module of unsupervised learning mechanism, which generates a generic pattern for a similar group of people that belong to said pattern; a record generator, which uses the model developed by said learning mechanism module for creating pseudo fabricated data records; and an output of a data set of pseudo fabricated records.
