Abstract (en)

[origin: WO2014076056A1] To create a novel security feature (200) for a value and/or security product (100), it is proposed to form fixed particles (220, 220') of a scattering material on at least one surface (310) of at least one substrate (300), wherein at least one surface field (210), in which a predetermined number n of particles are arranged, is formed on each of the at least one substrate surfaces. To this end, at least one substrate with at least one surface and the particles of the at least one type of scattering material are provided, and a predetermined number n of particles of the scattering material are applied to the surface field on the at least one surface and fixed there.
