Abstract (en)
[origin: WO2014076049A1] A novel security feature (200) for a value and/or security product (100) is formed by scattered material of at least a first type (210) and a second type (220) fixed to at least one surface (401) of at least one substrate (400). The scattered material of the first type (210) appears in a first colour to the human eye, and the scattered material of the second type (220) appears in a second colour. The scattered material of the first type (210) and the scattered material of the second type (220) form a colour progression structure (208) of colours running together on the at least one substrate surface (401).
