Abstract (en)
[origin: WO2014075819A1] The invention relates to a vehicle seat (1), particularly a motor vehicle seat, with a seat cushion (3) and a backrest (5), a seat mechanism (10, 11, 21, 30, 30a, 30b) connecting the seat cushion (3) and/or the backrest (5) to at least one seat rail pair (13), wherein the seat rail pair (13) has two seat rails (13a, 13b) that can be displaced relatively to one another and which can be locked together by means of a rail locking mechanism, and wherein the vehicle seat (1) can be shifted by means of the seat mechanism (10, 11, 21, 30, 30a, 30b) from a use position to a non-use position. According to the invention, coupling means (90, 190) couple the seat mechanism (10, 11, 21, 30, 30a, 30b) and the seat locking mechanism together in such a way that a least one seat rail pair (13) is locked in the use position and the non-use position of the vehicle seat (1) and is unlocked in an intermediate position of the vehicle seat (1) located between the use position and the non-use position.
