Abstract (en)

[origin: WO2014075946A1] The present invention relates to a washing machine comprising a tub (20) in which washing takes place, a tub drain outlet (21) having an inner wall (22) and draining water out of the tub (20) following washing, and a circular flap (50) disposed in the tub drain outlet (21). The novelty of the present invention is that the flap (50) comprises at least one first wing (511) and at least one second wing (512) disposed at an obtuse angle (a) to each other and the flap (50) is connected to the tub drain outlet (21) so that the flap (50) is partially movable about an assembly axis (a) defined by a folding line (514) joining together the first wing (511) and the second wing (512).
