Abstract (en)

[origin: WO2014059997A1] In order to improve the light-proofing of the window, the screening arrangement includes a screen element (92) mounted at the bottom member (71) of the sash (7), said screen element (92) extending between the side rails (3, 4). The screen element (92) has such a height (hse) in a direction perpendicular to the sash plane that it at least corresponds to or exceeds the distance (hsb) between the screening body and the screening plane.
