Abstract (en)

[origin: WO2014059998A1] In the window, the frame (6) and sash (7) each has a top member, a bottom member (61, 71) and two side members (63, 64; 73, 74), a pane (70) and at least one pane holding device (1300) at the bottom member (71) of the sash. Cover members include a bottom sash covering (1319). The screening arrangement includes a screening device (1) with a top element (2), two side rails (3, 4), and a screening body (5). Mounting means (92, 94) is provided for connecting the side rails (3, 4) of the screening device to the sash (7) in that the bottom sash covering (1319) includes a hook section (1323), and the mounting means (92, 94) includes an engagement portion (941) adapted to be brought into engagement with the hook section (1323) of the bottom sash covering and a fixing portion (921), and the mounting means (92, 94) is adapted to be positioned on top of the bottom sash covering (1319) with the engagement portion (941) in engagement with the hook section (1323), and to be fixed to the sash bottom member (71) by means of a number of fastening means adapted to exclusively cooperate with said at least one pane holding device (1300).
