Abstract (en)

[origin: WO2014076420A1] The invention relates to an attachment device (10) for a thermal protection panel (1), including an attachment base (11) ensuring the attachment thereof to a stationary structure (2) that receives the panel, and that is provided with a fastening structure (12) capable of penetrating a corresponding through-opening (1b) of the panel to be attached in order to engage with a corresponding retaining means (15) associated with a complementary retaining button (16), characterised in that the fastening structure extends over a length greater than the thickness of the panel to be attached, such as to project from same, and in that the device includes an intermediate spacer (17) arranged between the panel and the retaining button, and having a through-opening which the projecting portion of the fastening structure is capable of partially penetrating in order to engage with the means for retaining the button.
