Abstract (en)  
[origin: CN104921431A] The invention relates to a soft shell trolley suitcase (10,110,210). The suitcase is provided with a lower side (11). At the lower side, the soft shell trolley suitcase can perform rolling frontward movement, wherein the soft shell trolley suitcase comprises the components of a front component (12) and a back component (13), wherein each one of the front component and the back component forms the main side (14) of the soft shell trolley suitcase and at least partially forms a relatively narrow side (15) of the soft shell trolley suitcase, and the front component (12) and/or the back component (13) is at least formed by soft material; trolleys (17) which are arranged at the lower side, wherein the trolleys (17) are arranged and support the front component and the back component (12,13), and particularly two rollers (17) are arranged at the front component (12) and two rollers (17) are arranged at the back component (13). The soft shell trolley suitcase that is connected with the base structure on which the trolley for supporting are arranged can realize satisfactory effects at aspects of simple structure, high torsional stiffness and easy or practical control.
