Abstract (en)
[origin: EP2921076A1] A slide rail assembly includes first, second, and third rails (10, 12, 14) slidably connected together, a guiding base (18) on the first rail (10), a first contact member (20) on the second rail (12), and a second contact member (22) on the third rail (14). The first contact member (20) extends through an opening (38) of the second rail (12) and corresponds to the guiding base (18). When the third rail (14) is pulled out, the second contact member (22), which corresponds to the first contact member (20), abuts against the first contact member (20) such that the second rail (12) is displaced with the third rail (14). Once the first contact member (20) is guided by the guiding base (18) to another position and separates from the second contact member (22), the third rail (14) can be pulled out relative to the second rail (12).
