Abstract (en)  
A sash and a fitting using the sash include first and second fixed glass plates 211 and 212 that are bonded to each other with a heat-insulating space 215 held therebetween by interposing a spacer member 214 between peripheral ends of the first and the second glass plates 211 and 212, and a third fixed glass plate 213 that has a rectangular shape having smaller outside dimensions than those of the first fixed glass plate 211, and is bonded to the first fixed glass plate 211 with a heat-insulating space 217 held between the third fixed glass plate 213 and the first fixed glass plate 211 by interposing a spacer member 216 at peripheral ends of the third fixed glass plate 213 with an end face on the tail end side thereof lying on the same plane as that of the first fixed glass plate 211. Rail and stile members 22, 23, and 24 are bonded to a surface of the first fixed glass plate 211 at peripheral ends where end faces of the first fixed glass plate 211 project more than end faces of the third fixed glass plate 213. A stile member 25 is bonded to a surface of the third fixed glass plate 213 at a peripheral end where an end face of the first fixed glass plate 211 aligns with an end face of the third fixed glass plate 213.
