Abstract (en)
[origin: EP2922080A1] An electromagnetic relay comprises a core having a pole portion and an end portion, a coil being arranged around the pole portion of the core, and an armature being movable relative to the core between a first position and a second position. The coil is provided for generating a magnetic field that moves the armature from the first position to the second position. The armature comprises a hole. The end portion of the core is arranged in the hole when the armature is in the second position.
