Abstract (en)
[origin: WO2014080132A1] The invention relates to a shoe sole comprising a base surface (2) whereon alveolar shapes (4) are formed, that are defined by radial walls (3) projecting from the surface, said walls being interconnected in order to form a network for rigidifying said sole, said rigidifying network comprising an area wherein said walls are interrupted in order to form segments (9) that are each formed by a portion of the wall (3) defined by recesses (10), said segments being arranged such that they are able to deform in order to create a sub-network for shock absorbency when contact is made with the ground.
