Abstract (en)

[origin: WO2014079513A1] A drive method for moving a first and a second forming means for processing a web-like material (material web) arranged between the same, in particular for deforming for example a paperboard web in a corrugated manner, wherein the forming means, and possibly the material web therebetween, are brought into force-fitting and/or form-fitting engagement, and the forming means are each assigned a dedicated drive, and the drives are activated such that the forming means apply a predetermined pressing force against one another and possibly to the material web.
