Abstract (en)  
[origin: WO2014080129A1] The invention relates to an augmented-reality optical device (1) characterised in that it comprises: a display (2) for emitting at least one image in the form of a beam; an optical surface (4) arranged essentially transversely to said main optical axis such that it deflects the image towards the eye; a semi-reflective plate (3) for deflecting the image between said display and said optical surface; and a polariser (6) for eliminating the parasite light.
