Abstract (en)  
[origin: EP2735976A1] The code-based information system comprises a specific application unit that is implemented on a mobile communication unit. The association of the code with the individual data is transmitted to a database serving as a central server. The code (37) is recognized through the mobile communication unit by application implemented unit on the mobile communication unit, where the association of the code with the individual data is called up from the database. The data is displayed on the mobile communications unit. The application is implemented with an addressor of the individual data. An independent claim is included for a method for code-based provision of individual data on a mobile communication unit.
