Abstract (en)

[origin: WO2014079557A1] For a method for the computer-implemented rating of an industrial property right using an arrangement (1) of data processing installations that comprises at least one first data processing installation (2, 3, 4), at least one second data processing installation (8), at least one input device (12) and at least one output device (42), provision is made for first features (M1) to be first of all ascertained from the at least one first database (5, 6, 7) and for the first features (M1) to be made available on the second data processing installation (8). Next, indicators (I) from guidelines (9) stored in the second data processing installation (8) are ascertained from the first features (M1). From the indicators (I), a first value (W1) and a range of values (WB) for the property right (S) that is to be rated are ascertained and are output on the output device (42). The second data processing installation (8) is physically separate from the input device (12) and arranged outside the range of access of a user (13).
