Abstract (en)  
[origin: WO2014082039A1] The present disclosure provides improvements to an RF induction lamp. In embodiments, the improvement may comprise a lamp that is substantially similar to standard incandescent lamps, operates at a higher frequency, enables dimming, provides synchronous burst-mode dimming, provides load control in the operation of an external dimming device, increases the rate at which the lamp illuminates at startup, and is reduced in size through utilization of a control processor to facilitate packaging of the lamp electronics.
