Abstract (en)

[origin: WO2014078881A2] In one aspect, the invention provides a method for configuring an operating device (20) for operating an illuminant (22), wherein a mobile communication device detects lighting parameters by means of at least one optical sensor (12, 13), via internal image processing (18) in the device for example, and wherein the operating device (20) emits an address by modulation of the illuminant (22), and wherein the mobile communication device recognizes, particularly via the optical sensor (12, 13), with the aid of internal image processing (18) in the device for example, the address emitted by the operating device (20) on the basis of the lighting parameters detected.
