Abstract (en)

[origin: EP2923607A1] A method to divide a space, in particular the inside of a drawer, by means of a system (1) having a first pin (7VII; 7III), a second pin (7VIII; 7IX), and a dividing element (8III; 8IV), which has the shape of a ring and is at least partially made of a flexible and/or elastic material, wherein the first pin (7VII; 7III) is positioned in a first position; the second pin (7VIII; 7IX) is positioned in a second position; the dividing element (8III; 8IV) is stretched by means of the first pin (7VII; 7III) and the second pin (7VIII; 7IX), so as to define an area (SIII; SIV) inside said dividing element (8III; 8IV); the size of said area (SIII; SIV) being defined by the position of the first pin (7VII; 7III) relative to the second pin (7VIII; 7IX), the dividing element (8III; 8IV) being fitted around both the first pin (7VII; 7III) and the second pin (7VIII; 7IX).
