Abstract (en)

The present invention is a detergent dispenser (1) that keeps the detergent (3) within its body before transferring thereof into the dishwasher (A) during the washing process, and enables the detergent (C) to be melted with the water sprayed while the dishwasher (A) is working and to be flowed into the dishwasher (A). The detergent dispenser (1) according to the present invention comprises detergent bed (3) that can move upwards and downwards (+y, -y), switches to open position while the machine (A) is working, and keeps the detergent (C) within its body during the washing process, and detergent flow channels (3.1) that enable the water sprayed within the machine (A) to enter into the detergent bed (3) when said detergent bed (3) is opened, and melt the detergent (C) and enable the detergent (C) to be flowed into the machine (A).
