Abstract (en)  
[origin: CN104943438A] The invention pertains to a device for forming the spine region and/or the adjacent joint areas of a book case prior to casing-in the book block by means of a forming component that lifts the spine region out of the extended starting position relative to rails that hold down the case boards or the joint areas, wherein the forming geometry of the forming component can be varied by means of motor-driven adjustments, and wherein a separate adjusting drive is assigned to each of the elements that can be adjusted relative to the base element and form the book case.

Abstract (de)  
Die Erfindung betrifft eine Vorrichtung zum Formen des Rückenbereiches und/oder der daran angrenzenden Falzbereiche einer Buchdecke vor dem Einhängen des Buchblockes durch ein den Rückenbereich aus der gestreckten Ausgangslage gegen die Deckelpappen oder die Falzbereiche niederhaltende Schienen aushebendes Formstück, wobei die formgebende Geometrie des Formstückes durch motorische Verstellungen veränderbar ist, wobei jedem der zu einem Basiselement verstellbaren die Buchdecke formenden Element ein separater Verstellantrieb zugeordnet ist.
