Abstract (en)

[origin: EP2923980A1] Device to prepare winding mandrels (P) on which to form reels, comprising a support structure (6) to which supports (61a, 61b) are associated configured to support, close to or distanced from each other and on their circumference, a plurality of cores (N) keeping them aligned along a pre-determined axis of insertion, and a gripping unit (4) configured to allow the introduction of said mandrel (P) in said cores (N) and along said axis of insertion. The preparation device comprises adjustment members (621) configured to adjust the position of the supports (61 a, 61b) in a radial direction with respect to the axis of insertion and to dispose said axis of insertion of said mandrel (P) always in the same position with respect to the support structure (6) as at least the diameter of said cores (N) varies.
