Abstract (en)

[origin: CA2941202A1] To produce a flat steel product having a yield strength of = 700 MPa and a microstructure which is bainitic to an extent of = 70% by volume, the following working steps are carried out according to the invention: a) melting of a steel melt consisting of (in % by weight) C: 0.05-0.08%, Si: 0.015-0.500%, Mn: 1.60-2.00%, P: = 0.025%, S: = 0.010%, Al: 0.020-0.050%, N: = 0.006%, Cr: = 0.40%, Nb: 0.060-0.070%, B: 0.0005-0.0025%, Ti: 0.090-0.130% and unavoidable impurities, remainder Fe; b) casting of the melt to form a slab; c) reheating of the slab to 1200-1300 °C; d) rough rolling of the slab at 950-1250 °C and with an overall pass reduction of = 50%; e) hot finish-rolling of the rough-rolled slab with a hot-rolling end temperature of 800-880 °C; f) cooling of the hot finish-rolled flat steel product within = 10 s after the hot finish-rolling to 50-620 °C at a cooling rate of = 40 K/s; g) coiling of the hot finish-rolled flat steel product.

Abstract (de)

Zur Erzeugung eines Stahlflachprodukts mit einer Streckgrenze von ≈ 700 MPa und einem ≈ 70 Vol.-% bainitischen Gefüge werden erfindungsgemäß folgende Arbeitsschritte absolviert: a) Erschmelzen einer Stahlschmelze, die (in Gew.-%) aus C: 0,05-0,08%, Si: 0,015-0,500%, Mn: 1,60-2,00%, P: ≈ 0,025%, S: ≈ 0,010%, Al: 0,020-0,050%, N: ≈ 0,006%, Cr: ≈ 0,40%, Nb: 0,060-0,070%, B: 0,0005-0,0025%, Ti: 0,090-0,130%, sowie unvermeidbaren Verunreinigungen, Rest Fe besteht; b) Vergießen der Schmelze zu einer Bramme; c) Wiedererwärmen der Bramme auf 1200-1300 °C; d) Vorwalzen der Bramme bei 950-1250 °C und einer Gesamtstichabnahme ≈ 50%; e) Fertigwarmwalzen der vorgewalzten Bramme mit einer Warmwalzendtemperatur von 800 - 880 °C; f) Kühlen des fertig warmgewalzten Stahlflachprodukts innerhalb von ≈ 10s nach dem Fertigwarmwalzen auf 550-620 °C mit einer Abkühlgeschwindigkeit von ≈ 40 K/s; g) Haspeln des fertig warmgewalzten Stahlflachprodukts.
