Abstract (en)  
An in-wall casing (1) for sliding doors (2) which comprises a pair of first, front posts (3a, 3b) and an abutment jamb (4), between which the door (2) slides, a second, rear post (5), for the abutment of the door (2), and an upper lintel (6), all of which define the opening that can be closed by way of the door (2); the upper lintel (6) has a squared profile that defines a fifth wing and a sixth wing (16a, 16b), the perimetric edges (17a, 17b) of which lie on mutually parallel planes; the fifth and sixth wings (16a, 16b) each have a third, flat resting base (18a, 18b) for a pair of jambs (19a, 19b), so that the perimetric edges (17a, 17b) of the fifth and sixth wings (16a, 16b) can be arranged flush with the outer lateral surface (20a, 20b) of the pair of jambs (19a, 19b); a gap is provided between the fifth and sixth wings (16a, 16b) and the pair of jambs (19a, 19b).
